Introduction to this Guide

- The purpose of this Guide provide a representative summary of regulatory procedures faced by US products entering the Japanese market, from pre-import authorization to import clearance.
- The series covers a total of 24 products listed below.
- This report is **#19 Cheese**.

24 products covered in this series:

- #1 Fresh fruits
- #2 Frozen fruits/vegetables
- #3 Processed fruit puree
- #4 Condiments & sauces
- #5 Cookies & chips
- #6 Live seafood (e.g. shellfish, lobster, etc.)
- #7 Soups
- #8 Health bars
- #9 Chocolates
- #10 Breakfast Cereals
- #11 Pet Food
- #12 Frozen breads
- #13 Fruit/vegetable juice
- #14 Sugar/flavor added water
- #15 Mineral water
- #16 Ice Cream
- #17 Wine
- #18 Distilled spirits
- #19 Cheese
- #20 Dough Mixes
- #21 Dried fruits
- #22 Herbal teas
- #23 Non-alcoholic beverage bases and syrups
- #24 Frozen prepared foods

Disclaimer

- This Guide is for general information purposes only.
- While every effort has been taken to ensure accurate information at the time of publication, neither USDA nor Meros can accept liability for any content or information contained in any other website to which this guide refers.
- Any and all information is subject to change without notice.
- Legal or other professional advice should be sought for any specific matters of concern.
- All information must be re-confirmed with importers and competent authorities.
Step-by-step Checklist

A. Pre-Embarkation
- 1. Prepare an Ingredient List and a Manufacturing Process Flowchart
- 2. Check the sanitary requirements that apply to your product
- 3. Confirm legal compliance with food standards and other regulations
- 4. Check the tariff classification and customs duty
- 5. Create a product label
- 6. Register trademarks and other intellectual property rights

B. Embarkation
- 7. Obtain a Sanitary Certificate and a Certificate of Analysis
- 8. Clear export customs

C. Import Clearance
- 9. Clear sanitary inspection
- 10. Clear food safety quarantine procedure
- 11. Clear import customs

*After Import Clearance
Food safety issues faced after import clearance
A. Pre-Embarkation

These steps will help confirm product eligibility for import into Japan and provide guidelines for preparing required documentation.
A. Pre-Embarkation
Checklist

1. Prepare an Ingredient List and a Manufacturing Process Flowchart

2. Check the sanitary requirements that apply to your product

3. Confirm legal compliance with food standards and other regulations

4. Check the tariff classification and customs duty

5. Create a product label

6. Register trademarks and other intellectual property rights
1 Prepare an Ingredient List and a Manufacturing Process Flowchart

Exporters will be required to provide a list of all ingredients, as well as a manufacturing process flowchart. Generally, potential importers will request this information early in the process of vetting new products for purchase in order to confirm whether the product can be imported as food.

This information will later be submitted to the quarantine station as a mandatory step in the import clearance process. Importers will often provide these documents to a Quarantine Station in advance in a process known as Prior Consultation (Refer to Step 2); as well as to a Customs office to get an Advance Ruling (Refer to Step 4).

Steps to take:
- 1-1 Prepare an Ingredient List
  - All ingredients
  - Food additives, colors and flavors in detail
- 1-2 Prepare a Manufacturing Process Flowchart
  - Manufacturing process in order
  - Details on heating and other sterilization methods

Sample documents are found on the next two pages.

Whose responsibility is this?
The manufacturer or exporter is responsible for creating these documents for the importer, who will submit them to a Quarantine Station.

Timeframe / Cost:
No fees required at submission or for Prior Consultation.

Responsible government agency:
- Ministry of Health, Labour, and Welfare (MHLW)

Relevant laws/regulations:
- The Food Sanitation Act / Ordinance for Enforcement of The Food Sanitation Act

Best Practices
- It is best to prepare these documents even before talking with importers.
- A non-disclosure agreement (NDA) can be signed by your importer or local partners before sharing these documents.

Common Concerns
- Many manufacturers are protective of their proprietary recipes and processes. However, inadequate information can result in rejection or significant delays at import clearance. Contact the ATO Tokyo if you have doubts about how to prepare these documents.

Key Contacts
- For further information, contact Agricultural Trade Office (ATO), Tokyo
  E-mail: atotokyo@fas.usda.gov
  Tel: (011-81-3) 3224-5115
  Mon-Fri 8:30 AM -5:30 PM in Japan time
- 11 Quarantine Stations under MHLW located at major ports/airports offer Prior Consultation for importers (See Step 3).
- The Manufactured Imports and Investment Promotion Organization - MIPRO provides free phone consultation for both exporters and importers.
  Tel (English and Japanese): (011-81-3) 3989-5151
  Mon-Fri 10:30 AM -4:30 PM in Japan time
Sample of an Ingredient List

The document can be prepared in English or Japanese on the Manufacturer’s or Importer’s letterhead. There is no required format, but should include the following:

- **All ingredients**, in descending order, by weight.
- If a processed product is used as an ingredient, a list of the ingredients in that processed product is also necessary.
- Include information on the following items, all of which are considered **food additives** in Japan (Refer to page 13):
  - **Synthetic additives, artificial colors, artificial flavors** – chemical names, international index number (for colors), CAS number (for flavors), chemical formulas (for others), the reason for use, share in weight or content in ppm (amount). Also confirm and note that it meets Japanese FSA standards;
  - **Natural food additives** – names, the reason for use, amount
  - **Natural colors and flavors** – name, description
  - **Post-harvest agrochemicals** – chemical names
- If an **extract** is used: extraction method, including whether organic solvent is used

### XYZ FOODS

123 Woodland Avenue, City, State, ZIP, United States  
(100) 232 2322 / (100) 232 2332

#### INGREDIENT LIST

<table>
<thead>
<tr>
<th>Ingredients</th>
<th>Share</th>
</tr>
</thead>
<tbody>
<tr>
<td>Milk</td>
<td>99.5</td>
</tr>
<tr>
<td>Salt</td>
<td>0.5</td>
</tr>
<tr>
<td>Rennet (as processing aid)</td>
<td>0.01</td>
</tr>
</tbody>
</table>

**Allergens:**  
Contains milk. May contain traces of nuts.

- **Product name**  
- Manufacturer and facility name (official name, no abbreviations) and address (physical address, not P.O. box)
- **Share by weight is optional**, except for synthetic additives. Share by weight is not mandatory for quarantine clearance. However, it may be required by the importer for customs clearance and for Advance Ruling in order to determine the tariff classification (See Step 4). You may be able to provide share by weight as a range (e.g. 40-45%).
- Information related to **allergens** (mandatory for eggs, milk, wheat, buckwheat, peanut, shrimp and crab)
- Date of document preparation, person responsible, title, company name, signature
### Sample of a Manufacturing Process Flowchart

The document can be prepared in English or Japanese. Use the Manufacturer’s or Importer’s letterhead. There is no required format, but should include the following:

- **Description of the entire manufacturing process** from raw materials to packaging.
- A manufacturing process description is mandatory, but can be written in a way that protects proprietary information.
- **Heating/cooling and other sterilization methods**
  - **Heating process:**
    - Heating method. (e.g., hot water, boil, steam, etc.)
    - Temperature & heating time.
    - Center temperature, if the product needs to meet specific conditions.
  - **Cooling after heating:**
    - Cooling methods (e.g., running water cooling, natural cooling)
    - Temperature and time
  - **Other sterilization process:**
    - For chemical sterilization: the name and amount of the agent used.
    - **Note:** Irradiation is banned except for preventing potato germination.

<table>
<thead>
<tr>
<th>Product Name</th>
<th>Manufacturer and facility name (official name, no abbreviations) and address (physical address, not P.O. box)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product: XYZ Brand Mozzarella 100g</td>
<td>XYZ Foods Ltd. 123 Woodland Avenue, City, State, ZIP, United States</td>
</tr>
</tbody>
</table>

**Manufacturing Process Flowchart**

- **Heat Treatment (72 degrees Celsius, 40 secs.)**
  - Add bacteria
  - Add rennet to form curd
  - Drain whey
  - Press curd into mold
  - Add salt
  - Maturation
  - Individual packaging
  - Pack in cardboard cartons

**Note:** The chart includes process steps from raw materials to packaging, detailing specific methods and conditions required for the manufacturing process.
Check the Sanitary Requirements that Apply to Your Product

Cheese is subject to animal health quarantine and a USDA Sanitary Certificate must accompany the shipment (See Step 7). Processed cheese is not subject to animal health quarantine.

Compliance with sanitary requirements will be examined during the Sanitary Inspection at the Animal Quarantine Service under MAFF (See Step 9).

Steps to Take:
- **2-1** Confirm sanitary requirements that apply to your products.
- **2-2** Have your importer confirm those requirements through Prior Consultation at the Animal Quarantine Service office under MAFF and the Quarantine Station under MHLW that oversee the port of entry planned for your product.

Whose responsibility is this?
The importer is responsible, but the manufacturer/exporter should be familiar with this process.

Timeframe / Cost:
No fees required at Prior Consultation.

Responsible government agencies:
- Animal Quarantine Service, Ministry of Agriculture, Forestry and Fisheries (MAFF)

Relevant laws and regulations:
- Act on Domestic Animal Infectious Diseases Control

Best Practices
- USDA APHIS maintain a registry of exporter requirements, but work closely with your importer to check the sanitary requirements in detail.
- Be aware that cheese and other dairy products were recently added to the list of livestock products that must receive sanitary authorization.

Key Contacts
- **ATO Tokyo**
  E-mail: atotokyo@fas.usda.gov
- **USDA contact points** for exporters are:
  - Your local Service Centers, Veterinary Services, Animal and Plant Health Inspection Service (APHIS), USDA

Contact Information for Prior Consultation
- **28 Animal Quarantine Service offices under MAFF** offer Prior Consultation for importers (Japanese only).
Confirm Legal Compliance with Food Standards and Other Regulations

Japan’s Food Sanitation Act (FSA) establishes the sanitary standards for food products. Depending on the product category, you may need to check compliance with other related regulations.

Compliance with food standards will be discussed in Step 10, Food Safety Inspection at the Quarantine Station under MHLW.

Steps to take:
- 3-1 Confirm legal compliance regarding product-specific standards
- 3-2 Confirm legal compliance regarding food additives
- 3-3 Confirm legal compliance regarding agrochemical residues
- 3-4 Confirm legal compliance and risk regarding contamination by harmful substances
- 3-5 Confirm legal compliance regarding other ingredient issues (Genetically-engineered inputs and CITES), as applicable.
- 3-6 Confirm legal compliance regarding manufacturing process and packaging
- 3-7 Have your importer confirm legal compliance through Prior Consultation at the Quarantine Station that oversees the expected port of entry of your product.

Whose responsibility is this?
The importer is responsible, but the manufacturer/exporter should be familiar with these issues.

Responsible government agency:
- Quarantine Stations, Ministry of Health, Labour, and Welfare (MHLW)
- Ministry of Economy, Trade and Industry (METI)
- Ministry of Agriculture, Forestry and Fisheries (MAFF)

Relevant laws/regulations:
- The Food Sanitation Act (FSA)
- Specifications and Standards for Foods, Food Additives, etc. Under the FSA

Best Practices
- Assess your product’s compliance with food standards before moving forward.
- Since the number of English-language documents are limited and the regulations can change, collaborate closely with an importer or a trusted advisor to ensure your product meets all standards.

Common Concerns
- Food additive regulations are very strict. As of the end of 2018, Japan had approved only 820 additives (excluding natural flavorings), while the US FDA had approved around 1,600 additives.
- Harmful substances (e.g., Mycotoxins) or irradiation process can also lead to US foods being ineligible for importation to Japan.

Key Contacts
- ATO Tokyo
  E-mail: atotokyo@fas.usda.gov
- 11 Quarantine Stations under MHLW offer Prior Consultation for importers (Japanese only). See Step 3-7
- MIPRO also provides free phone consultation.
MHLW defines specific standards for dairy products, such as milk solids content, tolerance limits for bacteria count and sanitization methods. Check the dairy standards in MHLW’s Ministerial Ordinance on Ingredient Specifications for Milk and Dairy Products. Some specific examples of MHLW cheese standards which would be important for US supplier include:

- **Natural cheese** (Soft and semi-hard-type):
  - *Listeria monocytogenes* – less than 100 colony-forming units per 1g (excluding cheese heated after packaging and cheese that will be heated before human consumption).

- **Processed cheese**:
  - Milk solids – 40.0% or more;  E. Coli – no detection

- **Raw milk** (as an ingredient of cheese):
  - Milk shall not be taken from cow, goat or sheep, which are to be classified into any of the following categories:
    - within 5 days after delivery
    - those which have been either fed or injected with drug that has an impact on milk and within the period when the drug remains in milk
    - those which shows significant response by injecting a biological agent

If you exports frozen cheese, check frozen foods specific standards under The Food Sanitation Act (FSA). Some specific examples of FSA frozen foods standards which would be important for US supplier include:

- **Frozen food to be consumed without heating, and frozen food to be consumed after heating:**
  - Bacterial count – max. 100,000 per gram;  E. coli – no detection; must be stored at below -15°C

- **Frozen food other than above:**
  - Bacterial count – max. 3,000,000 per gram;  E. coli – no detection; must be stored at below -15°C

*Note that these product-specific standards (such as the regulations regarding bacteria count) are always subject to inspection at quarantine stations.*

Detection of E. coli, listeria, and excess bacteria are one of the common reasons for rejection of US cheese cargo at the port.

**Steps to Take:**

- **3-1-1** Confirm that your products meets MHLW specific standards for milk and dairy products
- **3-1-2** If your product is frozen, confirm that your product meets frozen foods standards under FSA.
- **3-1-3** Talk with your importer about hygienic control planning and contamination risk planning

**List of Product-specific Standards:**

1) **Milk and dairy products**
   - Ministerial Ordinance on Ingredient Specifications for Milk and Dairy Products is found here (Japanese only):
     https://elaws.e-gov.go.jp/search/elawsSearch/elaws_search/lsg0500/00/detail?lawId=326M50000100052

2) **Product specific standards under the FSA** (Total 23 products, including frozen foods)
   - Product Specific Standards under the FSA are summarized here (English):
   - More detailed information is found here (Japanese only):
3-2 Confirm Legal Compliance regarding Food Additives

Japan has a **Positive List System for food additives**, which means a food additive is not permitted at all unless MHLW has specifically approved it.

Food additives, according to the Japanese definition, include **vitamins, minerals, amino acids, flavors, colors** and **post-harvest agrochemicals** (e.g. anti-mold agents for produce).

For some food additives, MHLW defines allowable standards, including accepted usages, target food products and tolerance levels.

The most common reasons for US processed foods to be found ineligible for import are inclusion of unapproved additives, or having additives that exceed allowable standards. One of past rejection cases in cheese include excess use of natamycin.

**Steps to Take:**
- **3-2-1** Confirm that all food additives contained in your product are listed in one of the MHLW’s lists of authorized additives. (See column on the right)
- **3-2-2** Confirm that all food additives contained in your product meet allowable standards. For such ingredients, add a note in your Ingredient List explaining that this ingredient meets the FSA standards.

**What if some additives contained in your product are not listed or do not meet the standards for use?**
- Consider reformulation to avoid using non-listed food additives.
- Contact the ATO Tokyo for further help if needed.

---

**MHLW’s lists of authorized additives by category:**

1) **Designated additives (post 1995)**
   - Designated by MHLW based on Article 10 of FSA.
   - The list (455 in total as of Jul 3, 2018) is here: [http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/list-designin.add-x](http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/list-designin.add-x)
   - Standards for use are here: [http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/stanrd.use](http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/stanrd.use)

2) **Existing food additives**
   - Additives that had already had a long history of use for human consumption in Japan at the time of the FSA revision in 1995.
   - The list (365 in total) is here: [http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/list-exst.add](http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/list-exst.add)
   - Standards for use are here: [http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/stanrd.use](http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/stanrd.use)

3) **Natural flavoring agents**
   - Natural agents derived from animals/plants and used as flavoring. No designated standards for use, if used as flavoring.
   - The list (612 in total) is here: [http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/list-nat.flavors](http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/list-nat.flavors)

4) **Ordinary foods used as food additives**
   - The list of foods (e.g. strawberry juice, agar) which can be used as additives. No designated standards for use
   - The list (abt. 100 in total) is here: [http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/list-general.provd.add](http://www.ffcr.or.jp/zaidan/FFCRHOME.nsf/pages/list-general.provd.add)
Japan has a **Positive List System for agrochemical residue**, which means it is prohibited to distribute any foods which contain agrochemicals, unless MHLW has specifically approved their use and set a maximum residue limit (MRL).

Under the Japanese definition, agrochemicals include **pesticides**, **feed additives** and **veterinary drugs**.

As of early 2019, MRLs for around 800 agrochemicals had been established by MHLW. Note that there is a zero tolerance set for antibiotics and synthetic antibacterial substances in foods. There are also another 20 agrochemicals which have zero tolerance for foods. Any other substances are subject to the default MRL of 0.01 ppm. (See column on the right.)

For processed foods, the Quarantine Station calculates MRLs based on the ratios of ingredients in the final processed product.

Agrochemical residue can be a problematic issue, due to the differences in the MRLs between the US and Japan. You may want to get a Certificate of Analysis for agrochemical residue in advance to reduce the risk of detection of excessive MRLs during the food safety inspection at the port of entry. (See Step 7)

**Steps to Take:**

- **3-3** Confirm that any agrochemical residues are within the maximum residue limits by comparing product-specific MRLs in the MHLW’s lists of MRLs with the agrochemicals applied to your product (check by chemical formula or CAS number).

**What if an agrochemical residue contained in your product cannot meet the standards for use?**

- Consider ways to avoid using that agrochemical for exports to the Japanese market.
- Consult with ATO Tokyo.

### MHLW’s lists of agrochemical MRLs by category:

1) **Substances with designated MRLs**
   - MRLs for around 800 agrochemicals have been designated by MHLW.
   - Some of them are still provisional and will be modified later. New MRLs are also designated from time to time. Thus, the list changes frequently.
   - MRLs by product can be found at: [http://db.ffcr.or.jp/front/?lng=en](http://db.ffcr.or.jp/front/?lng=en)

2) **Substances with zero tolerance**
   - Antibiotics and synthetic antibacterial substances have zero tolerance for foods.
   - FSA also banned 20 agrochemicals for use in foods (zero tolerance). The list of 20 agrochemicals is here: [https://www.ffcr.or.jp/en/zenryuu/the-japanese-positive/positive-list-system---not-detected.html](https://www.ffcr.or.jp/en/zenryuu/the-japanese-positive/positive-list-system---not-detected.html)

3) **Substances having no potential to cause damage to human health**
   - There are 71 substances specified as substances having no potential to cause damage to human health by the MHLW. These are exempted from MRLs. The list is here: [https://www.ffcr.or.jp/en/zenryuu/the-japanese-positive/positive-list-system---exempted-substances.html](https://www.ffcr.or.jp/en/zenryuu/the-japanese-positive/positive-list-system---exempted-substances.html)

4) **Other substances**
   - Any other substances which are not included above three categories are subject to the uniform, default MRL of 0.01 ppm.
   - Such regulation is shown here: [https://www.ffcr.or.jp/en/zenryuu/the-japanese-positive/positive-list-system---uniform-limit.html](https://www.ffcr.or.jp/en/zenryuu/the-japanese-positive/positive-list-system---uniform-limit.html)
Confirm Legal Compliance and Risk regarding Contamination by Harmful Substances

Contamination by naturally harmful substances (mycotoxins, cyanide, shellfish toxins, etc.), and pathogens can also prevent the importation of US food products.

Article 6 of the FSA states that foods involving risk to human health cannot be sold; however, each controlled substance and its standards are regulated by different ministerial notifications. There is no publicly available list of all these substances, so it is recommended that manufacturers consult with Quarantine Stations in advance if there is any question of a harmful substance being detected in a food product.

In particular, be aware of the substances which are targets of MHLW’s Imported Foods Annual Monitoring Plan (See Step 10), although other substances could be an issue as well. The right-hand column lists substances specifically mentioned in past MHLW Monitoring Plans, as well as others that Quarantine Stations have warned about.

Mycotoxins, pathogenic microorganisms or decomposition/deterioration can occur during shipping.

Steps to Take:

3-4 Talk with your importer about contamination risk planning if your product could contain any of these harmful substances

Examples of harmful substances:

1) Naturally harmful products
   - Food containing toxic substances such as mycotoxins shall NOT be sold in Japan.

2) Pathogenic microorganisms
   - Food containing pathogenic microorganisms shall NOT be sold in Japan:
     - E. coli O26, O103, O111, O157
     - Listeria
     - Salmonella

3) Other harmful products
   - Food containing substances such as mercury shall NOT be sold in Japan.

4) Decomposed or deteriorated foods/ingredients
Confirm Legal Compliance regarding Other Ingredient Issues

Genetically-engineered foods

Food which is genetically engineered (GE), or food products that include GE ingredients or products derived from GE microorganisms, must be approved by MHLW. Currently, major GE crops commercially grown in the US have been approved by MHLW, but be aware of potential risks. For further information, contact the ATO Tokyo.

Steps to Take:
- [3-5-2] Your product should not contain any unapproved GE products or ingredients derived from unapproved GE microorganisms.

CITES (Convention on International Trade in Endangered Species of Wild Fauna and Flora) list

CITES is an international treaty that regulates the world’s wildlife trade. If your product includes CITES-listed ingredients, it is necessary to declare non-violation of the treaty.

Steps to Take:
- [3-5-3] Check whether any of your product ingredients are listed in CITES.
- [3-5-4] If your product uses CITES-listed products, declare that it does not violate the treaty in your Ingredient List prepared in Step 1, such as “The vanilla in this product is from cultivated plants.”

MHLW’s list of authorized GE products:
- The list of GE products that have undergone MHLW’s safety assessment is found here: https://www.mhlw.go.jp/english/topics/foodsafety/dna/index.html (Refer to ‘Lists of Products’)

CITES list:
- METI’s regulations regarding imports of goods related to CITES are found here: http://www.meti.go.jp/english/policy/external_economy/CITES/cites_imports.html
- You can search the CITES list by scientific name here: https://speciesplus.net/
Confirm Legal Compliance regarding Manufacturing Process and Packaging

Irradiation

Irradiation is generally prohibited for foods sold in Japan. In some cases, products that meet US standards for irradiation have been rejected in Japan.

Steps to Take:

- **3-6-1** Confirm that your manufacturing process does not use irradiation, except to prevent potato germination.

Food packaging

The revision of The Food Sanitation Act in June 2018 introduced a positive list system for materials allowed for food packaging. This means only packaging materials whose safety has been assessed by MHLW, and which MHLW has designated for use, will be permitted in the Japanese market. MHLW intends to implement this new system in FY 2020.

Steps to Take:

- **3-6-2** Confirm that your packaging material meets the packaging standards.

Wood pallets

Note that wood pallets must be fumigated and be certified by the American Lumber Standard Committee (ALSC) and the National Wooden Pallet and Container Association (NWPCA). The International Plant Protection Convention (IPPC)'s International Standards for Phytosanitary Measures Guidelines for Regulating Wood Packaging Material in International Trade (ISPM 15) regulates this protocol.

Steps to Take:

- **3-6-3** If you use wood pallets, confirm that the wood pallets are all fumigated and have an ISPM 15 treatment certification stamp.

Standards of packaging materials:

- The current packaging standards for synthetic resins, metal cans, rubber, glass, ceramic and enamel as of Feb 2019 are found here: [https://www.ffcr.or.jp/en/kigu/index.html](https://www.ffcr.or.jp/en/kigu/index.html)

IPPC standard:

- For more details, refer to the instruction at National Wooden Pallet & Container Association [https://www.palletcentral.com/page/ISPM_15](https://www.palletcentral.com/page/ISPM_15)
The importer should consult with the Quarantine Station that oversees the expected port of entry to confirm compliance with Japanese food safety regulations, as well as to obtain information related to inspections procedures for import clearance. **This step is optional, but highly recommended.**

Prior Consultation is offered only to importers. The inquiry can be made in English, but the Quarantine Station answers only in Japanese.

**Step to take:**
- [3-7] Confirm that your importer has undertaken Prior Consultation at the Quarantine Station for the expected port of entry for your product.

**Who initiates?**
**Importer.** The importer may engage a customs broker for this process.

**What information must be submitted?**
- Inquiry form by FAX, including
  - Product name, manufacturer’s product code number
  - Information on the manufacturer and the factory
  - Description of the packaging
  - Ingredient List, including detailed list of food additives (chemical names, share in weight or content in ppm, etc.)
  - Manufacturing Process Flowchart

**Timeframe / Cost**
- The Quarantine Station will normally reply within one week of submission of the inquiry.
- No charge.

---

**Contact Information for Prior Consultation**
- The key contact point is the Quarantine Station that has jurisdiction over the port/airport through which the importer is planning to import the product.
- Contacts for the consultation service division of **11 Quarantine Stations** located at major ports/airports under MHLW: [https://www.mhlw.go.jp/topics/yunyu/soudan/](https://www.mhlw.go.jp/topics/yunyu/soudan/) (Japanese)
- The list of all 111 offices of Quarantine Stations under MHLW: [https://www.mhlw.go.jp/english/policy/health-medical/health/dl/contact_list_jqs.pdf](https://www.mhlw.go.jp/english/policy/health-medical/health/dl/contact_list_jqs.pdf) (English)
- The Tokyo Quarantine Station has instructions on its Prior Consultation process: [https://www.forth.go.jp/keneki/tokyo/kanshi_hp/a013.html](https://www.forth.go.jp/keneki/tokyo/kanshi_hp/a013.html) (Japanese)
Check your product’s tariff classification in the most recent Japanese Tariff Schedule and confirm the tariff rate applied on your products. The most recent Tariff Schedule is here: http://www.customs.go.jp/english/tariff/index.htm

In order to expedite the customs clearance process, as well as to confirm the duties imposed on your product, your importer may get an Advance Ruling from the customs office that confirms the classification of your product.

**Steps to Take:**
- □ 4-1 Check tariff classification and confirm the customs duty imposed on your products.
- □ 4-2 Confirm that the importer has received an Advance Ruling on the classification of your product from a Customs office in advance, especially for processed products.

**Whose responsibility is this?**
The importer is responsible, but the manufacturer/exporter should be familiar with the process.

**Timeframe / Cost:**
- ▪ No fees required for Advance Ruling.
- ▪ Customs will reply within 30 days of submission of the application.
- ▪ The response from customs is valid for three years from the date of issuance.

**Best Practices**
- ▪ Check the tariff classification carefully because the Japanese classification can be different from the US classification.
- ▪ Getting an Advance Ruling is especially useful to avoid spending time at the port of entry trying to confirm the product category.
- ▪ Tariffs for competing suppliers can also be checked.

**Common Concerns**
- ▪ Importers may require the ratios of ingredients in order to obtain Advance Ruling.
  
  For further information, contact **ATO Tokyo**
  
  Email: atotokyo@fas.usda.gov

**Contact Information for Advance Ruling**
- ▪ Advance Ruling is available at **9 regional Customs offices**. Contacts (in Japanese):
  
  http://www.customs.go.jp/question2.htm#b

- ▪ What information must be submitted?
  - ▪ Inquiry form (C-1000, Japanese), including:
    - Ingredient List with ratios indicated for each ingredient,
    - Manufacturing Process Flowchart
    - Packaging details, etc.
  - ▪ Documents to show the business relationship between the importer and the supplier (sales contract, etc.)
Tariff Schedule

- The tariff schedule does not have a detailed definition of each classification. Therefore, getting Advance Ruling is especially useful to avoid time being spent at the port of entry trying to confirm the product category.
- Note that the product you plan to export might be categorized into a category which is not listed here, depending on its ingredients and manufacturing method.

### Tariff Schedule (as of February 1, 2019)

<table>
<thead>
<tr>

Create a Product Label

Product labels must be prepared in Japanese in accordance with Japanese regulations.

Generally, a product label is prepared by the importer with information from the exporter/manufacturer. However, the manufacturer will, at times, create the design if they want to print directly on the original packaging.

Product labels can be affixed to products in the US or in Japan before commercial distribution. Consult with your importer on how to handle labeling.

The New Food Labeling Act was amended and has been in effect since April 1, 2015. There is a 5-year transition period until March 31, 2020, at which time all labelling must conform to the Act.

Steps to take

- Provide the importer with all necessary product information and prepare product label according to the Japanese food labeling regulations. (Details on the following page)

Whose responsibility is this?

Importer

Related law/regulation and responsible government agency

- Food Labeling Act, Labeling Standards (general and product-specific) (Japanese only), Consumer Affairs Agency (CAA)
- [recycling symbol on packaging]: Act on Promotion of Effective Utilization of Resources, Ministry of Environment (MOE)
- [some product-specific labeling standards, like chocolate, ice cream, cheese, whiskey, dressing, biscuit and fruit juice]: Fair Competition Code (Japanese only), Federation of Fair Trade Conferences / Ministry of Economy, Trade and Industry (METI)
- [organic claims]: JAS Law, Ministry of Agriculture, Forestry and Fisheries (MAFF)

Best Practices

- Labeling regulations are varied, are often different from US regulations and change frequently, so consult closely with your importer about the labeling.

Common Concerns

- Only alcoholic beverage product labels are subject to inspection at customs clearance. However all labels are subject to the on-going in-market monitoring inspections by prefectural Health Centers. If a Health Center finds that your product label is incorrect, a product recall may be ordered.

Key Contacts

- ATO Tokyo
  E-mail: atotokyo@fas.usda.gov
- Food Labeling Division, Consumer Affairs Agency
  Consultation service is available (Japanese only): https://www.caa.go.jp/policies/policy/food_labeling/information/contact/
A food product label should include:

a. Name of the product
b. Ingredients, other than additives, in descending order in weight.
c. Food additives, in descending order of weight, and on a separate line from other ingredients
d. Net weight, in metric units only
e. Shelf life (Best-before date or use-by date)
f. Storage instructions
g. Country of origin, of the finished product
h. Info of the importer, name and address
i. Allergen information
j. Nutrition contents
k. Recycling symbol

- The Fair Competition Code for Cheese defines specific labeling standards, including definitions and detailed labeling specifications. The Fair Competition Code is voluntary regulation, but major retailers will require that these standards be met. The code is available here as a PDF, only in Japanese

Key Issues to be considered:

e. Shelf life:
   - The shelf life should be shown in one of the following two ways: best-before date or use-by date. The explanation is found here: [https://www.caa.go.jp/en/policy/food_labeling/pdf/syokuhin_en_013.pdf](https://www.caa.go.jp/en/policy/food_labeling/pdf/syokuhin_en_013.pdf)
   - Most wholesalers/retailers require that at least half the shelf-life indicated on the label remains when they receive an imported product. Furthermore, most will not accept products whose expiration date is earlier than expiration date of the shipment they previously received.

i. Allergen information
   - Notify the importer about the possibility of contamination by any of the seven allergens whose labeling is mandatory: shrimp, crab, wheat, buckwheat, egg, dairy products, and peanut.

j. Nutrition contents:
   - Notify the importer about 1) calories (kilocalories); 2) protein (grams); 3) fat (grams); 4) carbohydrate (grams); and 5) sodium (salt equivalent grams). The size of one unit of food can be decided by the labeler, but must be specified (e.g., 100 g, 100 ml.). From 2020, nutritional labeling will be mandatory for these 5 elements.
   - The U.S. nutritional fact panel is not acceptable, and labels must use the Japanese format.

k. Recycling symbol:
   - Notify the importer about the packaging materials used. The importer is required to cover all costs associated with recycling of the packaging.
   - The recycling symbol (aluminum, steel, paper, plastic and PET) must be printed on the packaging.

Other Areas You May Need to be Familiar with:

Genetically-engineered (GE) labeling:
   - GE labeling is required for certain products which use soybean, corn, potato, alfalfa, sugar beet and papaya (See Table 4 of USDA FAS Report) if the GE ingredient is within the top three ingredients by volume and more than five percent of total weight. Contact ATO Tokyo for further information.

Nutritional and health claims:
   - Japan has strict rules on functional and nutritional claims on food labeling. Refer to 12-13 pages of USDA FAIRS report.

Organic claims:
   - Japan’s organic food standards were established in the Japan Agricultural Standards (JAS). The US and Japan have an equivalency arrangement for organic plant products. The further details of the equivalency arrangement can be found here: USDA AMS, Organic Certification, International Trade Policies: Japan [https://www.ams.usda.gov/services/organic-certification/international-trade/Japan](https://www.ams.usda.gov/services/organic-certification/international-trade/Japan)

Country of Origin Labeling (COOL):
   - If you export products to be used as ingredients in processed products, you may need to be aware of recent changes in Country of Origin Labeling (COOL).
Sample of a Product Label

Mozzarella

Name of product: Natural cheese
Ingredients: Raw milk, salt
Net weight: 100g
Best-before date: Shown on the lower right
Storage instruction: Store at below 10 degrees C.
Country of origin: United States
Importer: Meros Trading 1-19-3, Kanda Awajicho, Chiyoda-ku, Tokyo

- Manufactured in a facility that uses peanuts.
- Consume as soon as possible after opening.
- If there are any problems with the quality, please contact us. We will send a replacement and cover the shipping charges. Contact phone no: 03-3526-2075

Recycling symbol: plastic
Best before date: Apr 1, 2020

6 Trademarks and other Intellectual Property Rights

To protect your trademarks in the Japanese market, you or your importer may want to register your trademarks. You may also consider using the Madrid System to register a trademark internationally. Manufacturers may want to design logos, brand names or distinctive packaging specifically for the Japanese market and therefore the trademarks that you register for the Japanese market may differ from the trademarks you have registered for the products sold in US.

Existing trademark registrations in Japan can be looked up here.
https://www3.j-platpat.inpit.go.jp/cgi-bin/ET/TM_AREA_E.cgi?1551688801394

Steps to take
- 6-1 Confirm that the name you want to trademark is not already registered in Japan.
- 6-2 Apply for trademarks and other intellectual property rights in Japan with the Japan Patent Office (JPO).

Whose responsibility is this?
Manufacturer / Exporter / Importer, depending on the situation

Application Information
- Refer to the Japan Patent Office (JPO)’s ‘How to apply?’ https://www.jpo.go.jp/english/faqs/apply.html
- Sample form is available here. https://www.jpo.go.jp/english/faqs/forms.html

Timeframe / Cost
- It normally takes around 9 months for trademark registration. (For fast track, 2.7 months, if certain conditions are met.)
- For a trademark, JPO’s application charge is JPY 3,400 + JPY 8,600/per classification. It may be necessary to consider additional patent attorney fees as well.

Government agency & law
- Japan Patent Office (JPO)
- Trademark Act

Best Practices
- Since trademark registration takes time, starting the process as early as possible is recommended.
- Consult with your importer. Your importer may be willing to help register the trademarks of your product/brand, for example, if they have exclusive import rights to the product.
- If your company does not have a representative office in Japan, you will need to appoint a Patent Administrator located in Japan.
- Be sure to check the name you want to trademark both in English and in Japanese (katakana). There are cases of US companies finding that there is already an existing trademark on the name they want to register.

Key Contacts
- International Affairs Division, General Affairs Department
  Japan Patent Office
  Address: 3-4-3 Kasumigaseki, Chiyoda-ku, Tokyo 100-8915, Japan
  Fax: (011-81-3) 3581-0762
  Email: PA0842@jpo.go.jp
  Website: https://www.jpo.go.jp/english/faqs/apply.html

  The JPAA can be helpful in finding a representative for you in Japan.

24
B. 
Embarkation

The following are steps to be taken upon embarkation.
B. Embarkation

Checklist

- 7. Obtain a Sanitary Certificate and a Certificate of Analysis

- 8. Clear export customs
Obtain a Sanitary Certificate and a Certificate of Analysis

USDA Sanitary Certificate
If your product is subject to Sanitary Inspection, a USDA Sanitary Certificate must accompany the shipment.

Japan requires a veterinary certificate issued by APHIS for dairy products imported from the United States. The specific certificate requirement differs depending on whether the product is for human or animal consumption, as well as other factors such as whether or not the product contains other ingredients of animal origin. For a full list of the required certificates, please consult APHIS iREGS.

Certificate of Analysis
A Certificate of Analysis is a document that certifies the results of the required laboratory testing. In order to be exempted from food safety inspections by the Quarantine Station upon arrival and to shorten the time required for import clearance, it is possible to get a Certificate of Analysis from a MHLW-certified laboratory in the US. However, this is not a common practice. If you do wish to obtain a Certificate of Analysis in advance, it is necessary to confirm what laboratory tests will be required with the Quarantine Station.

Steps to take
- 7.1 Obtain a USDA Sanitary Certificate
- 7.2 If the importer requests it, obtain a Certificate of Analysis from a MHLW-registered lab in the US. This process is optional.

Whose responsibility is this?
Manufacturer / exporter

Timeframe / Cost
- Variates by Product

Key Contacts
- ATO Tokyo
  E-mail: atotokyo@fas.usda.gov

Where to obtain a Sanitary Certificate?
- Veterinary Service Center (SC), Animal and Plant Health Inspection Service (APHIS), USDA

Where to obtain a Certificate of Analysis?
- US laboratories registered with MHLW.
  The list is found here:
  https://www.mhlw.go.jp/topics/yunyu/5/dl/a3.pdf
Clear Export Customs

Electronic Export Information (EEI) filing is common practice for export control documents. It is required for shipments above US$2,500 in value and for shipments of products which require an export license. It should be filed electronically through the Automated Export System (AES).

After embarkation, send the documents required for Japanese import clearance: Commercial Invoice, Packing List, Bill of Lading (B/L) or Airway Bill, as well as any sanitary certificates required. You may need to confirm with the importer (and with the customs broker) about the format and content of those documents in advance.

Steps to take

- **8-1** Prepare the following documents:
  - Commercial Invoice
  - Packing List
  - Shipping Instructions (These are instructions for shipping prepared by the exporter and provided to the shipping company.)

- **8-2** Declare export through EEI filing with the above documents, proceed through export customs clearance, and receive a B/L after loading.

- **8-3** Send the documents for import clearance to the importer.
  - Commercial Invoice
  - Packing List
  - B/L or Airway Bill
  - Sanitary Certificates, as needed

Whose responsibility is this?

Manufacturer / exporter. The export clearance procedures often are consigned to a customs broker.

**US export customs clearance instructions:**
Further instructions can be found in:

- Export Education,
The International Trade Administration
U.S. Department of Commerce
https://www.export.gov/export-education

- Basic Importing and Exporting
U.S. Customs and Border Protection
https://www.cbp.gov/trade/basic-import-export

**List of documents to be sent to the importer**

- **Commercial Invoice:**
  This is an invoice for the goods from the manufacturer/exporter to the importer. The invoice will be used by both US and Japan customs to determine the value of goods. It should include:
  - Information about the exporter (seller) and the importer (buyer)
  - descriptions of goods
  - quantity and unit price
  - payment information
  - mode of transport and its details
  - country of origin

- **Packing List:**
  This gives detailed information about the shipment, including:
  - information about the exporters and importers
  - invoice number
  - date of shipment
  - mode of transport and its details
  - the type of packaging
  - the quantity of packages
  - total net and gross weight (in kilograms)
  - total dimensions, etc.

- **Bill of Lading (B/L) or Airway Bill:**
  This is a contract between the exporter (owner of the goods) and the shipping company (carrier), which will be prepared based on the Shipping Instructions, and will be issued by the shipping company after loading. B/L is for sea freight and Airway Bill is for air cargo. The importer usually needs the original document as proof of ownership of the goods.
C. Import Clearance

The following steps must be completed before entering Japan.
C. Import Clearance

Checklist

- 9. Clear sanitary inspection
- 10. Clear food safety quarantine procedures
- 11. Clear import customs

After Import Clearance

Food safety issues faced after Import Clearance
Clear Sanitary Inspection

Import clearance starts from Sanitary Inspection at the Animal Quarantine Service, if the product is subject to such inspection (See Step 2). This inspection aims to prevent the spread of animal diseases.

Steps to take:
- 9-1 Submit an application for Sanitary Inspection to the Animal Quarantine Service with the USDA Sanitary Certification obtained in Step 7.
  - The Animal Quarantine Service may require other documents, such as the Commercial Invoice, Packing List, B/L and Manufacturing Process Flowchart.
  - The application can be submitted electronically through the Nippon Automated Cargo and Port Consolidated System (NACCS) or by paper copy.
  - Applications are accepted from as early as three days prior to the scheduled arrival of the cargo, and no later than one day prior to scheduled arrival.
- 9-2 Undergo document examination and on-the-site Sanitary Inspection.
- 9-3 If disease is detected, the Animal Quarantine Service will order either disposal or return of the shipment.
- 9-4 Once the shipment passes inspection, receive the Inspection Certificate.

Whose responsibility is this?
Importer. The entire import clearance process is often consigned to a customs broker.

Timeframe / Cost
- The Sanitary Inspection is free of charge. However, the importer needs to cover the cost of disposal or shipment return if ordered.
- The customs broker will usually charge 2000-5000 JPY for submitting the application, and they will add expenses for disposal or return if ordered.
- Timeframe for sanitary inspection varies from 10 mins to half a day.

Responsible government agency and relevant law/regulation
- Animal Quarantine Service, Ministry of Agriculture, Forestry and Fisheries (MAFF)
- Act on Domestic Animal Infectious Diseases Control

Sanitary inspection/sterilization method
- **Inspection method**
- **Sampling size**
Dairy products will require 3 samples regardless of the size of the shipment.
- **Designated sterilization method**
Sterilization is mainly for bones, skins, etc., and not for dairy products.

Reject Ratios at Sanitary Inspection
- The rejection rate at Sanitary Inspection for US dairy products was 0.5% in 2017 and 0.2% in 2018.

Key Contacts
- ATO Tokyo
  E-mail: atotokyo@fas.usda.gov
- The 28 Animal Quarantine Service contact points: http://www.maff.go.jp/aqs/sosiki/attach/pdf/address-6.pdf (Japanese only)
Food Safety Quarantine Procedures

The next step will be clearing food safety inspections at the Quarantine Station. This step checks legal compliance with food standards (See Step 3).

Steps to take:
- **10-1** Submit Notification for Importation of Foods to the Quarantine Station with:
  - Ingredient List and Manufacturing Process Flowchart
  - Any other required documents by Quarantine Station
  The application can be submitted electronically through Nippon Automated Cargo and Port Consolidated System (NACCS) or by paper copy. Applications can be submitted as early as 7 days prior to the scheduled arrival date.
- **10-2** Undergo document examination and on-the-spot examination by the quarantine officials.
- **10-3** Undergo Food Safety Inspection, if required. There are three possible types of inspection: (A) Self-inspection, (B) Ordered inspection, and (C) Monitoring inspection. These three inspections are discussed in the next slides. Most first-time imports require (A) Self-inspection.
- **10-4** Upon passing all food safety inspections, receive a Certificate of Notification for Importation of Foods.

Whose responsibility is this? Importer. The entire import clearance process is often consigned to a customs broker.

Timeframe / Cost
- The import notification itself is free of charge. The customs broker will usually charge 2000-5000 JPY for submitting the notification.
- If the product is subjected to (A) Self-inspection or (B) Ordered inspection, the inspection costs must be covered by the importer. The inspection costs for (C) Monitoring Inspections are covered by the Quarantine Station.
- Document examination normally takes a few hours. If inspection is required, it normally takes up to a week.

Best Practices
- Exporters often start with a small test shipment in order to clear the food safety inspections required for first-time exports. In general, these test results will be valid for one year.
- A single food safety violation can impact other shipments of the same product from other US exporters. Therefore, careful preparation for food safety inspections is critical.

Common Concerns
- Insufficient information or documentation can cause significant delays at the Quarantine Station. If your food safety clearance process takes more than one week, contact ATO Tokyo for consultation.

Rejection Rates at Sanitary Inspection
- The rate of US food imports subjected to one of the three food safety inspection types was 8.0% in 2016 and 10.1% in 2017.
- The rate of rejected cases among inspected products was 0.5% in 2016 and 0.7% in 2017. Aflatoxin detection in nuts, dried fruits and nut products accounted for 40% of the rejected cases.

Key Contacts
- ATO Tokyo
  E-mail: atotokyo@fas.usda.gov
- Contacts for the 111 Quarantine Station offices
Explanation of Food Safety Inspection Types

(A) Self Inspection

**Self Inspection** refers to food safety testing arranged by the Importer with a MHLW-registered inspection laboratory.

Legally, Self Inspection is a ‘voluntary action’ by the importer. It is based on Article 3 of the Food Sanitation Act (FSA) which states that the food business operator, including importer, shall take responsibility to ensure food safety, and for that purpose, shall conduct voluntary inspections of food for sale.

Although technically voluntary, in practice, Self Inspection is mandatory once it is requested by the Quarantine Station. If the importer does not follow the Quarantine Station’s guidance on testing targets and methods at this stage, the Quarantine Station can – and likely will – reject the shipment.

After testing, the Importer obtains a **Certificate of Analysis** (a report of the test results) from the laboratory and provides this to the Quarantine Station.

Self inspection is **usually required when a product is imported to Japan for the first time**.

In order to minimize the risk of rejection at the port of entry and to shorten the time for import clearance, it is possible to get a Certificate of Analysis from a MHLW-certified laboratory in the US (e.g., agrochemical residue test for fresh produce and food additive test for wine). (See Step 7) Contact ATO Tokyo for further information.

Who initiates?
The **importer** should consign the inspection to a MHLW-registered inspection laboratory.

**Target items to be inspected**
The Quarantine Station specifies the items to be tested after the document examination and conducts an on-the-spot examination. In general, the items to be tested include:

- **Food additives**: artificial coloring, preservatives, additives which have maximum tolerance levels, and additives which have had issues in the past;
- **Harmful products**, like toxic mold, pathogenic bacteria, methanol
- **Product specifics**, like bacteria count, for food categories which have product-specific standards such as soft drinks and frozen food
- **Agrochemical residue** (mainly for products which have had issues in the past)

**Sampling size**
Around 300-1,000 grams; the laboratory will specify the exact amount depending on the product.

**Timeframe / Cost**
The importer should **cover the cost** for Self Inspection. (Refer to fees on the right.)

Normally, the registered laboratory visits the warehouse for sampling and sends the Certificate of Analysis within a **week or less** after getting the samples.

**Term of validity of the Certificate of Analysis**

- The Certificate of Analysis is **normally valid for one year**. Once the Certificate of Analysis expires, Self Inspection must be conducted again and a new Certificate of Analysis will be required. If trouble has occurred with previous shipments, the Quarantine Station may ask the importer to conduct Self Inspection again, even if the importer has a valid Certificate.

**Some exceptions to the Certificate of Analysis term of validity:**

- There are some test items which are examined every time, like bacteria count, toxic mold, etc.
- In some cases, Certificate of Analysis test results regarding additives will be accepted for more than a year, if the importer submits documents to the Quarantine Station which indicate that the food product is manufactured with the same ingredients, the same manufacturing process, and at the same factory as the product whose additives were previously tested.

**Contacts of MHLW-registered laboratories**
A list of the registered laboratories is here (Japanese):

**Approximate Inspection Fees**

- Food additives: 6,000-20,000 JPY per target item
- Bacteria: 3,500-25,000 JPY per target bacteria
- Agrochemical residue: 10,000-30,000 JPY per target chemical
10-3 Explanation of Food Safety Inspection Types

(B) Ordered Inspection

For some products from certain exporters/countries which have had issues in the past, the Quarantine Station will order the importer to conduct inspection on all shipments. This is called Ordered Inspection.

The target products/exporters/countries are shown in the annual Ordered Inspection plan, which is explained briefly in MHLW’s Imported Foods Annual Monitoring Plan (English) and in more detail in the Notice of the Implementation of Ordered Inspection (Japanese only): https://www.mhlw.go.jp/stf/seisakunitsuite/bunya/kenkou_iryou/shokuhin/yunyu_kanshi/kanshi/index.html

MHLW may add more target products or countries if/when any serious issues are detected from more than one supplier from a particular country.

Once the product is targeted for Ordered Inspection, it will require 2 years of non-detection (or 1 year and at least 300 inspections without detection) to be exempted from further Ordered Inspection.

Who is responsible?
The importer should consign the inspection to a MHLW-registered inspection laboratory.

Target items to be inspected and testing/sampling method
The Quarantine Station specifies the items to be inspected, as well as the testing and sampling method.

Timeframe / Cost
The importer should cover the cost for ordered inspection. (For the cost of inspection, refer to the previous page.)

Normally, the registered laboratory visits the warehouse for sampling and sends the Certificate of Analysis within a week or less after receiving the sample.

- Soft and semi-hard natural cheese (US, manufactured by certain manufacturers) - Listeria monocytogenes
- Dried figs (all countries) – Total aflatoxins (not exceeding 10 μg/kg)
- Dried dates (US) – Total aflatoxins (not exceeding 10 μg/kg)
- Mixed spice (all countries) – Total aflatoxins (not exceeding 10 μg/kg)
- Processed food products (US, manufactured by a certain manufacturer) – Irradiation

Contacts of MHLW-registered laboratories
**Explanation of Food Safety Inspection Types**

**(C) Monitoring Inspection**

**Monitoring Inspection** occurs when the Quarantine Station randomly selects shipments and conducts their own testing for the purpose of overall monitoring of the food safety of imported products.

The target products/countries are shown in the annual ordered inspection plan, which is explained briefly in [MHLW’s Imported Foods Annual Monitoring Plan (English)](https://www.mhlw.go.jp/stf/seisakunitsuite/bunya/00000201769.html), and in more detail in the [Monitoring Plan for Imported Foods and Other Related Products](https://www.mhlw.go.jp/stf/seisakunitsuite/bunya/kenkou_iryou/shokuhin/yunyu_kanshi/kanshi/index.html) (Japanese only) which can be found here:

MHLW may increase the frequency of monitoring, as well as add more targeted test items, products or countries if/when any serious issues are detected.

**Who is responsible?**

The **Quarantine Station** conducts the inspection.

**Target items to be inspected and testing/sampling method**

The target items for inspection and the testing/sampling method are specified in the Monitoring Plan.

**Timeframe / Cost**

The Quarantine Station will cover the inspection cost.

Normally, it will take a week or less to get the results of the monitoring inspection.

You can clear customs and distribute the products to the market even before getting the results of the Monitoring Inspection. However, it is recommended that the importer hold the products in a bonded area until the results are received, in case some issue is detected. If an issue is detected, the Quarantine Station will order a recall. The importer normally is expected to cover the cost of storage during the inspection.

---

**The Target Items for Monitoring Inspection in 2018**

Based on the Monitoring Plan for Imported Foods and Other Related Products of FY2018, the target items are as follows:

**General targets:**
- Antimicrobial substances
- Agrochemical residues
- Food additives
- Pathogenic microorganisms
- Toxic mold
- Genetically Engineered food
- Irradiation

**Specific targets for cheese**
- Cheese
  - E. Coli (Natural cheese)
  - Listeria (Natural cheese)
  - Salmonella (Natural cheese, Ice Cream)
Clear Import Customs

Finally, clear import customs and pay applicable import taxes (See Step 4) at the Customs office.

Steps to take:
- 11-1 Submit Import Declaration to Customs: The application can be submitted electronically through Nippon Automated Cargo and Port Consolidated System (NACCS) or by paper copy. The application can be submitted after disembarkation or up to 2 weeks prior to scheduled arrival of cargo.
- 11-2 Pass document examination
- 11-3 Pass on-the-spot Customs Inspections (See the right column), if required
- 11-4 Pay the import tax and consumption tax
- 11-5 Receive an Import Permit

Whose responsibility is this? Importer. The entire import clearance process is often consigned to a customs broker.

Timeframe / Cost
If the product is not subject to inspection, customs clearance only takes a couple hours. Product inspection can take up to half a day. Customs will not charge for customs clearance procedures. The customs broker will charge from about JPY 3000 to 10,000 for customs clearance procedures, and will add other extra costs if the product becomes subject to inspection.

Responsible government agency and relevant law/regulation
- Japan Customs
- Customs Act (Japanese only)

Customs Inspection
- What will be inspected?
  - Are there any prohibited item such as drugs, guns, counterfeits, etc.?
  - Are the Inspection Certificate and the Certificate of Import Notification of Foods in order, if they are required?
  - Are there indications of misrepresentation or misleading the place of origin?
  - Has a proper tax filing been declared?
- Inspection method
  Major inspection methods include:
  - [For drugs, guns, etc] X-ray inspection
  - [For counterfeits] Visual confirmation
- Cost
  Inspection is free of charge, but the importer needs to cover transportation costs to the inspection site.

Key Contacts
- Contact points of the 9 regional Customs offices (English): http://www.customs.go.jp/question_e.htm
Summary
Import Clearance Flow

Arrival and unloading at the port/airport

9-1 Submit an application for Sanitary Inspection to the Animal Quarantine Service

9-2 Undergo examination and **Sanitary Inspection**

No detection

If bacteria etc. are detected

9-3 Undergo Food Safety Inspection

Pass

If non-compliance is determined

9-4 Receive a Sanitary Inspection Certificate

Rejected

10-1 Submit Notification for Importation of Foods to the Quarantine Station

10-2 Undergo document examination and on-the-spot examination

If no inspection is required

If food safety inspection is required

10-3 Undergo **Food Safety Inspection**

Pass

Rejected

10-4 Receive a Certificate of Import Notification of Foods

Rejected

11-1 Submit Import Declaration to Customs

11-2 Pass document examination

If no inspection is required

If customs inspection is required

11-3 Pass **Customs Inspection**

Pass

If non-compliance is determined

11-4 Declare the duty and consumption tax

Rejected

11-5 Import Permit Granted

---

**Average duration**

- From arrival to unloading into bonded storage:
  - 40 hrs (port)
  - 3.5hrs (airport)

- From bonded storage to import declaration:
  - 44 hrs (port)
  - 43 hrs (airport)

  - **Sanitary Inspection at Animal Quarantine Service** takes from 10 mins to half a day.

  - **Document examination at Quarantine Station** takes few hours. Once food safety inspection is required, it could take up to one week

- **For customs clearance:**
  - 3 hrs (port)
  - 0.5 hrs (airport)
Food Safety
Issues Faced After Import Clearance

Even after imported food products pass customs and enter the Japan market, there is on-going food safety monitoring of imported food products. Importers remain responsible for the food safety of imported products as long as the products are circulating. This includes any costs or damages related to product recalls or consumer health complaints.

- **Voluntary Recall**
  The importer might recall a product voluntarily, if they themselves foresee any compliance issues.

  In Tokyo, voluntary recalls must be reported to the local government. Applicable cases can be found here (Japanese only): [http://www.fukushihoken.metro.tokyo.jp/shokuhin/jisyukaisyuu/jyouhou.html](http://www.fukushihoken.metro.tokyo.jp/shokuhin/jisyukaisyuu/jyouhou.html)

  One example is a recall of chocolate bars with a milk contamination risk that was not mentioned on the label.

- **Food Safety Inspection by Prefectural Health Centers**
  The Food Sanitation Act requires each prefecture to have a plan for monitoring food safety in accordance with national guidelines. Thus, each prefecture monitors the safety of food products in the market and provides guidance to importers, wholesalers, and retailers. Prefectural Health Centers are in charge of this monitoring.

  The monitoring includes imported food product sampling (checking for agrochemical residue, contamination by genetically engineered ingredients, irradiation), on-site inspection of importers’ food safety assurance systems, monitoring of food labeling, etc.

  If a violation is detected, prefectures may order a recall.

  For example, the Tokyo government reports the results of its inspections and violations here: [http://www.fukushihoken.metro.tokyo.jp/shokuhin/ihan/nendo_index.html](http://www.fukushihoken.metro.tokyo.jp/shokuhin/ihan/nendo_index.html)

- **Financial Liability for Recalls and Food Safety Risk**
  Importers usually purchase various forms of insurance to reduce the financial risk from recalls and consumer complaints related to imported food products. This includes product liability insurance (to cover the risk of illness or accidents incurred by end users) and recall insurance.

  Financial liability for recalls or other damages have been issues of dispute between Japanese importers and US exporters/manufacturers.

---

**Best Practices:**
- It is best to discuss in-market food safety risk planning with importers in advance and confirm that your importer is aware of all insurance needed.
