

**Overview:** In 2023, the United States exported over \$450 million of potatoes and potato products to Japan, making Japan the #2 overseas market for U.S. potatoes. Japan is a major importer of cooked and prepared frozen potatoes. The U.S. potato products accounted for 59 percent of Japan's total potato product imports. The years below correspond to Japan's fiscal year beginning April 1.

**Phytosanitary Issues:** Currently, 16 states are eligible to export chipping potatoes to Japan (HS 0701.90.000). Since 2020, U.S. chipping potatoes can enter Japan throughout the year. U.S. chipping potato imports are subject to further restrictions on overland transportation and ports of entry, in addition to following specific import protocol including phytosanitary certificate.

There are no regional or seasonal restrictions on imports of processed potatoes, such as frozen French fries.

U.S. table stock potatoes are not currently eligible for export to Japan.

**Market Considerations:** Japan's demand for U.S. potato (non-fresh) products is strong with potatoes increasing in popularity as a side-dish in Japanese cuisine. Favored for their reliable quality, uniform size, and white color, U.S. frozen French fries lead all potato export product categories. Opportunities for continued growth exist in both the food service and retail sectors, especially for frozen potato products and potato bread. The Japanese retail market favors convenient, small and/or single-serve, microwavable, and/or ready-to-eat products such as fries, frozen mashed potatoes, and mixed vegetables with potatoes. The United States is the sole foreign supplier of fresh chipping potatoes in Japan.
